

**CS110 Kairova Brief**

Print-ready course policy, grading, rhythm, and support lanes

COMMAND NEXUS // SYLLABUS UPLINK

CS110: FUNDAMENTALS OF COMPUTER SCIENCE

Section 70 // 3 Units // In Person // Canvas + Command Nexus

This course blends computer science, AI-assisted development, storytelling and web design, C# and Python programming, data representation, human-computer interaction, information security, command-line tools, and introductory game development. Canvas remains the official academic home base. Command Nexus supports selected guided workflows, briefings, and assignment experiences inside the same pipeline.

ADMINISTRATIVE SECRETARY

Melissa Heredia // mheredia@valleycollege.edu

Course Flow, Tools, and Communication

The baseline rhythm of the course and the systems students are expected to use consistently.

Course Flow

Collaborate with your classmates, plan the work, and follow the Canvas assignment instructions in order. Complete every posted requirement, submit the finished assignment through the Canvas submission portal, and verify that your files and links work before leaving the assignment.

Required PC

A PC is required for this course. You may bring a compatible PC of your own or use a classroom PC during scheduled class meetings.

Required Systems

You need reliable internet access, a supported web browser, Visual Studio Code, Git, the current .NET SDK for C#, the designated course cloud storage, Canvas, and the course Discord.

Communication

Discord is the primary place for course and assignment questions. Check Canvas announcements, the course Discord, and SBCCD student email daily. Use a private Discord message or email for concerns that should not be discussed publicly.

Station Manifest Resources

These core intake resources also live inside Command Nexus. Here they are included directly in the syllabus so the same books, software, accounts, and checklist can print clearly with names, icons, and usable links.

Required Textbooks & References

Attention First is required course reading. The remaining references are free, open, or publicly accessible online. Save or bookmark them before their pipeline begins.

D

Attention First

Core guide for Attention-Driven Design, Teams and Tools, and the AAA learning process. **Required course reading.**

VIEW BOOKSTORE

[- HTTPS://ADDP2P.COM/BOOKSTORE/](https://addp2p.com/bookstore/)

CS

Introduction to Computer Science

OpenStax college-level reference for computational thinking, systems, software development, data, ethics, security, and emerging technologies.

OPEN FREE BOOK

[- HTTPS://OPENSTAX.ORG/DETAILS/BOOKS/INTRODUCTION-COMP
UTER-SCIENCE](https://openstax.org/details/books/introduction-computer-science)

C#**Microsoft C# Documentation**

Official C# language guide with beginner tutorials, fundamentals, object-oriented programming, code samples, and reference material.

OPEN C# GUIDE

- [HTTPS://LEARN.MICROSOFT.COM/EN-US/DOTNET/CSHARP/](https://learn.microsoft.com/en-us/dotnet/csharp/)

H**MDN: Structuring Content with HTML**

Open learning module covering semantic HTML, document structure, links, lists, images, forms, and accessible content.

OPEN HTML MODULE

- [HTTPS://DEVELOPER.MOZILLA.ORG/EN-US/DOCS/LEARN_WEB_DEVELOPMENT/CORE/STRUCTURING_CONTENT](https://developer.mozilla.org/en-US/docs/Learn/Web_Development/Core/Structuring_Content)

W**MDN Learn Web Development**

Open curriculum for HTML, CSS, JavaScript, accessibility, files, tools, and front-end development practice.

OPEN WEB CURRICULUM

- [HTTPS://DEVELOPER.MOZILLA.ORG/EN-US/DOCS/LEARN_WEB_DEVELOPMENT](https://developer.mozilla.org/en-US/docs/Learn/Web_Development)

Required Software & Applications

Install these developer applications on your workstation before active sector instruction begins.

.N**.NET SDK**

Official cross-platform compiler and runtime for building and testing C# applications. **Required before the C# pipeline begins.**

DOWNLOAD .NET

- [HTTPS://DOTNET.MICROSOFT.COM/EN-US/DOWNLOAD](https://dotnet.microsoft.com/en-us/download)

VC**Visual Studio Code**

Primary editor for HTML, CSS, JavaScript, Python, C#, project files, terminal work, and Git.

DOWNLOAD VS CODE

- [HTTPS://CODE.VISUALSTUDIO.COM/](https://code.visualstudio.com/)

U**Unity Hub**

Multi-platform game engine. Enables loading 3D project loops, physical properties, and interactive files.

DOWNLOAD UNITY

- [HTTPS://UNITY.COM/DOWNLOAD](https://unity.com/download)

PY**Python 3**

Programming runtime used for introductory logic, data work, automation, and comparison with C#.

DOWNLOAD PYTHON

- [HTTPS://WWW.PYTHON.ORG/DOWNLOADS/](https://www.python.org/downloads/)

G Git

Version-control tool used to save development history, recover changes, and share project work. **Required.**

DOWNLOAD GIT

[HTTPS://GIT-SCM.COM/DOWNLOADS](https://git-scm.com/downloads)

AI

Course-Approved AI Tools

AI use is required where assigned. Use the free, campus, account-free, or instructor-provided route listed in Canvas. A paid personal subscription is not required.

Required Account Logins & Configurations

Setup these profiles before the first day of instruction to establish sector transmission links.

C Canvas LMS

Primary learning platform. All coursework, quiz clearances, and grades are strictly processed here.

ACCESS CANVAS

[HTTPS://SBCCD.INSTRUCTURE.COM/](https://sbccd.instructure.com/)

GH

GitHub Profile

Distributed version control. Create your profile to host, manage, and push codebase builds for evaluation.

CREATE GITHUB ACCOUNT

[HTTPS://GITHUB.COM/JOIN](https://github.com/join)

G Google Services Link

Students receive a free institutional Google account. Synchronize access or configure personal settings for submissions.

ACCESS GOOGLE

[HTTPS://ACCOUNTS.GOOGLE.COM/](https://accounts.google.com/)

D

Discord Communication Server

Required for active sector operations. Secure instant communication, peer debugging frequencies, and bulletins.

JOIN UPLINK SERVER

[HTTPS://DISCORD.GG/D857UPWU2Y](https://discord.gg/D857UPWU2Y)

Orientation Checklist

Clear these intake tasks early so the term begins with working software, valid access, and stable submission flow.

01 Read the Syllabus

Review the full course syllabus and station manifest materials.

02

Take the Info Quiz

Take the Important Information Quiz before continuing deeper into the course.

03

Prepare Development Tools

Install the Week 1 tools listed in Canvas and verify that each required application launches correctly.

04

Bookmark Textbooks

Download or bookmark the required textbooks and references.

05 Verify Accounts

- + Create and verify GitHub and Canvas access before production assignments begin.

06 Join Discord

- + Join the course Discord server and review communication expectations.

07 Subscribe to Tutorials

- + Subscribe to the course video tutorial channels or module links used for training support.

08 Confirm Submission Flow

- + Complete the first in-class assignment and confirm your submission route works.

03 // OVERVIEW

Course Description, Objectives, and Outcomes

Course Overview

CS110 introduces core computer science concepts through development, design, and storytelling. Students learn computational thinking, data representation, human-computer interaction, ethics, basic security, operating systems, command-line tools, web development, programming, and introductory game development. Attention-Driven Design and the Pathways-to-Pipelines structure connect each topic to visible project work.

Independent Time Expectation

To succeed in this course, learners should plan for approximately 6 to 8 hours per week of independent computer time for reading, building, review, troubleshooting, and assignment completion.

Course Objectives

- Apply secure coding techniques to object-oriented programming.
- Apply the programming development process using fundamental programming constructs and predefined data structures.
- Choose professional responses to ethical issues in computing.
- Compare primitive data types, describe how each is stored in memory, and select an appropriate type for a problem.
- Decompose a program into subtasks and exchange information through parameters.
- Describe compiling, interpreting, linking, and executing, and identify the errors associated with each phase.
- Differentiate object-oriented, structured, and functional programming methods.
- Produce algorithms for simple problems and trace program execution.
- Build a working program using command-line tools and an integrated development environment.
- Create a web page with a text editor and an authoring system.

Student Learning Outcomes

- Apply algorithmic techniques to solve computational problems.
- Apply the programming development process to problems solved with fundamental programming constructs and predefined data structures.
- Compare and contrast primitive data types, describe how each is stored in memory, and identify the criteria for selection.
- Differentiate object-oriented, structured, and functional programming methodologies.

Learning Pipelines

CS110 moves through four connected pipelines. Each pipeline adds a new production method while carrying forward the story, files, evidence, and problem-solving habits from the previous one.

01

1. The Beginning

Orientation, diagnostic setup, file discipline, communication channels, saving, cloud backup, and baseline workflow habits.

50 POINTS TOTAL

02

2. Storytelling

HTML, CSS, and JavaScript turn the learner's character and adventure into a comic, interactive story, choice pathway, or informational site.

90 POINTS TOTAL

03

3. App Development

Python and C# introduce variables, decisions, loops, functions, classes, data, debugging, and small application systems connected to the Kairova mission.

175 POINTS TOTAL

04

4. Game Development

Three.js and Unity introduce scenes, objects, movement, collisions, state, game behavior, and the larger synthesis of the semester.

200 POINTS TOTAL

Grading System and Assignment Points

POINTS-BASED NOTICE

This course uses a straight points-based grading model. Percentages and letter grades calculated automatically by Canvas are not reliable indicators of the real structure. Track your work by points and assignment requirements.

GRADE	POINTS	MEANING	SEGMENT	POINTS
A	725 - 1000	Outstanding performance and complete technical mastery	The Beginning Pipeline	50
B	625 - 724	Above average execution and reliable operational competence	Storytelling Pipeline	90
C	525 - 624	Satisfactory comprehension and functional logic skills	App Development Pipeline	175
D	450 - 524	Needs improvement to meet core standards	Game App Development Pipeline	200
F	Below 450	Fails to meet minimal course requirements	Quizzes	15
			Pipelines and Quizzes Sum	530
			Final Project	150 - 500

COURSE SEGMENT & WEEKLY BREAKDOWN	EVALUATED POINTS
01 // The Beginning Pipeline - Week 1 (Environment Setup & Diagnostics) - Week 2 (Saving & Cloud Backup)	50 pts total 25 pts 25 pts
02 // Storytelling and Web Development Pipeline - Week 3 (Character and Story Extension) - Week 4 (HTML Structure and Semantic Content) - Week 5 (CSS Visual Design) - Week 6 (JavaScript Choice, Interaction, and Dome Systems)	90 pts total Assignment points are listed in Canvas
03 // Programming and App Development Pipeline - Python foundations and data - C# foundations and object-oriented programming - Application logic, debugging, and API connections - App Development Reflection Assignment	175 pts total Assignment points are listed in Canvas
04 // Game Development Pipeline - Three.js interactive scene work - Unity scenes and C# scripts - Movement, collisions, state, and game behavior - Game Development Reflection Assignment	200 pts total Assignment points are listed in Canvas

Weekly Rhythm, Communication, and Submission Protocols

01 // Briefing

Review the Canvas module, announcements, readings, and any Nexus briefing materials for the week.

02 // Build

Complete the required coding, story, lab, app, or worksheet work for the current assignment.

03 // Submit

Upload or link your work in Canvas using the exact required format and any required confirmation text.

04 // Review

Check feedback, verify your links and files, and prepare for the next assignment step.

Discord and Communication Protocols

- **Discord is the primary communication platform for this course.** Ask course and assignment questions in your course channel or the designated help channel.
- Keep non-course conversation in the Discord channels designated for general or non-course discussion.
- Communicate respectfully. Follow course, college, and Discord rules; do not harass others, post discriminatory content, spam channels, or share private records or personal information.
- Public course questions should remain public so the learning community can help. If you email a public course or assignment question, you may be directed to post it in Discord first.
- The Discord community may answer first. The instructor will respond when a question remains unanswered and will correct answers that are incomplete or inaccurate.
- Send private concerns by direct message to the instructor on Discord or by SBCCD email.
- Check Canvas announcements, the course Discord, and SBCCD student email daily.
- Allow 24 to 48 hours for email responses.
- Telephone voicemail is not routinely returned; use Discord or email for the fastest response.

Submitting Your Work

- **The requirements are the contract for the work expected.** An assignment is not complete when a posted requirement is missing.
- Unless the assignment states a different rule, each missing standard requirement reduces the assignment grade by 5 points.
- **Every starred requirement (*) is essential and must be submitted in an easily visible location.** If any starred requirement is missing, the entire assignment may receive no more than 1 point.
- All assignments must be submitted through Canvas and only as directed in the assignment instructions.
- Assignments close at the deadline published in Canvas. The instructor does not reopen an assignment for an individual learner or in response to a personal request.
- An authorized Pathways to Pipelines mechanism may initiate a course-wide reopening. When activated, the same submission window opens for everyone, and Canvas displays the official reopened deadline.
- Email submissions are not accepted and receive no grade unless the instructor explicitly directs otherwise.
- Name files clearly using the required pattern: `FirstNameLastName_Assignment#.xxx`.
- Open your own shared links before submitting them and confirm that cloud folders, files, and code are accessible.

RSI Communication Plan

- **Synchronous office hours:** Thursday 11:30 AM to 12:30 PM, with additional Zoom or Discord meetings scheduled as needed.
- **Weekly announcements:** Students should expect a beginning-of-week announcement that frames the upcoming work, identifies priorities, and clarifies common trouble points.
- **Question response loop:** Post public course and assignment questions in the designated Discord channel so classmates can answer first. The instructor responds when needed and corrects incomplete or inaccurate guidance. Use a Discord direct message or SBCCD email for private concerns. Instructor responses normally occur within 24 to 48 hours.
- **Assignment feedback:** Feedback is provided on submitted work throughout the term. Timing depends on assignment type, but students should expect regular instructor response tied to graded work.

Instructor Presence Plan

- **Discussion presence:** Instructor-facilitated discussion support is built into selected weeks rather than every week.
- **Proactive outreach:** Students may receive direct outreach after missing work, low participation, or major assignments that show a need for intervention.
- **Follow-up pattern:** Individual questions, confusion patterns, and recurring errors may lead to additional clarification posts or targeted reminders.
- **Honest workload planning:** The course communication structure is designed around interaction the instructor can realistically sustain throughout the full term.

07 // TECH, INTEGRITY, AND SUPPORT

Requirements, Conduct, Accommodations, and Campus Resources

Course Requirements

- Obtain the required course materials and software.
- Use the course Discord for required communication and collaboration.
- Use the designated course cloud storage to save, organize, and share your work.
- Secure the time to read, practice, and review all assigned material.
- Bookmark Canvas and track assignment and test dates on a calendar.
- Maintain a backup of completed work on another secure cloud location or USB drive.
- Follow assignment notes and requirements exactly as posted.

Collaboration, Evidence, and Conduct

Collaboration is expected. Learners may explain concepts, demonstrate techniques, share strategies, troubleshoot problems, provide feedback, and work beside one another. Each learner must submit the required evidence under their own name and be able to explain, modify, or demonstrate it when asked. Identify meaningful collaborators, source material, and AI tools when an assignment requires it. Respectful conduct is required in every course space.

AI Use and Documentation

AI use is required where an assignment identifies an AI role. Learners must inspect and test AI output, document meaningful prompts and revisions when requested, explain the submitted work, and protect private information. A paid personal subscription is not required. Canvas lists the approved free, campus, account-free, or instructor-provided route for each required activity.

Attendance & Drop Policy

Each scheduled class meeting carries one Action Point. A learner earns it by attending the meeting, participating in the collaborative Action Session, and submitting the requested in-class evidence by the announced deadline. Canvas submission alone does not establish attendance; the instructor must also verify participation.

A learner who misses both scheduled meetings during the first week and does not complete the corresponding in-class Action Records will have a drop initiated for nonattendance. After Week 1, missing four cumulative Action Points may result in being dropped for insufficient attendance and participation, subject to college deadlines and policies.

Action Points document participation and do not add to or subtract from the regular assignment grade. Learners should report Canvas or submission problems before the Action Record closes and remain responsible for confirming their official enrollment status.

Accommodations

If you need disability-related accommodations, contact DSPS as early as possible and communicate with the instructor. DSPS is located in ADSS 105. Voice: (909) 384-4443.

Need Help

Instructor email: mstalbert@valleycollege.edu
Tutoring Center: svctutoring@gmail.com
Campus computer lab: B220

Pathways to Pipelines Course Assets

Tickets, Units, Power-Ups, Guild Cards, character abilities, and related course assets may exist during the course. These optional systems are not required to pass the core course, and Tickets and Units are separate systems. Current acquisition, transfer, redemption, purchasing, and use rules are maintained through [Pathways to Pipelines](#) or another location announced in Canvas. Operational rules may change as the course develops; Canvas and the current assignment instructions identify the rules in effect.

Final Project and Capstone Direction

Final Project Rules

- The default final project mode is individual work.
- Group work is allowed only if a written group contract is formally submitted.
- A group lead may remove members who fail to complete assigned tasks.
- If removed from a group, the learner must complete the project individually or find another group willing to accept them.

Instructor Role in Final Phase

During the final project stage, the professor acts as a gatekeeper for standards rather than a solution provider. Learners are expected to operate with greater independence, using their documentation, peer network, and course resources to complete the project.
